

KinderCare Program

The first six years of a child's life are an extremely important time in their development when the brain is developing connections faster than at any other time. Strong brain foundations are critical to support future learning and life success. The KinderCare Program is offered in addition to kindergarten to allow for all day programming and increased opportunities for children to engage in purposeful play-based activities with peers. Activities are designed to encourage exploration, foster creativity, problem solving skills and language expression to support future learning and well-being.
